

**You have the vision
We have the solution**

GLASS & ALUMINIUM SYSTEMS

TORAX

INTRODUCTION

TORAX is a company that deals with the projecting and building of aluminum construction especially in aluminum facade constructions in order with the technical norms implemented by world standards for this type of products. Our goal is to offer and secure: building quality, successful project leading, technical solutions, orders and as a final result we pay special attention to our product's quality.

Our company was formed in 1991 and we have hired personnel (engineers, locksmith, welder, fitter, and glazier) with many years of experience of aluminum construction on different markets in Republic of Macedonia, Europe and the Middle East. (Kuwait and the U.A.E.), while being under superintendence by world consulting entities.

With our development we realize close technical cooperation with world known companies, that are the bearers of development itself in this area. We must emphasise our cooperation with: Dow Corning (in the field of silicon), AGC-Glaverbel (in the field of glass) Schüco, Alumil, Profilco, Wicon (in the field of aluminum construction area) Dorma (in the field of automatic doors), Alukönigstahl (in the field of facade with stain less sub-construction), Hörmann (in the field of garage doors), Ninz (in the field of fireproof doors), Kin Long (in the field of spider constructions)etc.

As a result of this cooperation we are constantly updated with the latest achievements and with them we can solve the most complex tasks that our users require as well as architecturally constructive solutions.

We have 9000 square meters space on disposal in which you can find:

- Design bureau
- Aluminum constructions building plant
- Plant for composite material element construction.
- Glass processing plant.
- Profile warehouse, half products and finished products.
- Its own transport park

The warehouses are equipped with machines for aluminum profile, glass, composite materials, steel processing etc. As a result our company is able to construct all types of products: aluminum and glass doors, aluminum windows or wooden aluminum profiles, frontline aluminum or steel sub-construction from all types,(structural or half-structural, ventilated, glass-made or stone) sky light, roofs, fire-proof doors, security doors, garage doors, different types of fences, automatic doors, all types of bulkhead walls, inner and outer glass setup, profiles and composite materials.

A view in the future

Our goal is to be specialized in the use of different systems that are applied in the field of aluminum constructions. Because of this the borders of our country does not represent our functioning limits. Everything we can do what we can offer, we also do it abroad.

According to that our engineers-designer are also engaged to update constantly with new solutions and construction of new profiles in order to please the client's demands.

Because we use other materials in the aluminum constructions (rubber, stain less profile, glass etc.) we have formed a cooperation with a numerous companies form these areas, and we also engage special experts from educational institutions like Mechanical Faculty and Civic Faculty especially in the area of construction and statistics.

We believe that it is possible to fulfill the high quality requirements and to retain optimal prices at the same time. This strategy was fertile in the past period. The will to make changes and the implementation of novelties is one of the basic keys for successful cooperation with the clients in one surrounding that lives through daily changes.

In our work we accepted these basic principles in order to achieve our goals:

- Open roads for every idea
- Ambitious strategy for investment in equipment and personnel
- Respecting the upper level of indebtment
- Transfer and foreign novelty acceptance
- Respecting of the specifications and the wishes of the clients

If we summarize all of the above stated, we can realize our one and only motto:

Our solution is your vision.
